

VeldoraHaven — 30-Day Launch Content Pack

Outdoor Living, Elevated.

Month theme: The season the sauna was built for. Autumn light, first cold mornings, fire at dusk.

Built from verified live-site facts only (site audit 2026-09-02). Channels: Instagram, Pinterest, Facebook, YouTube, TikTok, LinkedIn.

Total items: 98 posts (IG 18 · Pinterest 30 · Facebook 12 · TikTok 16 · YouTube 12 Shorts + 2 long-form · LinkedIn 8).

1. How to use this

1. Shoot or collect the assets in Section 2 first — nothing here publishes without its asset.
2. Work the calendar in Section 3 top to bottom. Day 1 = your chosen start Monday.
3. Copy each post from Section 4 exactly. Captions are final; hashtags are final. Do not add emoji.
4. Every destination URL is live on veldorahaven.com. Paste it as-is (Pinterest link field, YouTube description, IG link-in-bio slot, LinkedIn body).
5. Any price you see is labelled with a country and its VAT rate. Never publish a price without that label.
6. Use Section 6 for comments and DMs the same day, in the customer's language.
7. If someone asks for a lead time, a freight cost or a delivery date — use the approved reply. Do not improvise one.
8. Pinterest is the volume channel: post its 30 pins in the batches shown, not all at once.

2. Asset shot list

2A. Available from approved brand material (Auroom Wellness, Röshults, EcoSmart Fire retailer libraries)

Use only assets supplied under the retailer agreements. No watermarks, no third-party imagery, no AI-rendered "real" product.

#	Asset	Use for
A1	Auroom Halo barrel sauna, full exterior, Natural Wood, 3/4 architectural angle, landscape	IG feed, FB, Pinterest
A2	Auroom Halo barrel sauna, Brushed Black exterior, same angle — for the finish side-by-side	IG carousel, TikTok, Pinterest
A3	Auroom Luma barrel sauna with porch — porch detail and full exterior	IG, Pinterest, YouTube long-form

#	Asset	Use for
A4	Auroom Sola square barrel sauna, flat-panel exterior, straight-on elevation	Pinterest, carousel
A5	Auroom Nora square barrel sauna, exterior + interior bench view	IG, Pinterest, LinkedIn
A6	Auroom Terra modular sauna, Terra S and Terra M side by side or sequential	Carousel, YouTube
A7	Auroom Arti compact sauna — glass front, full frontal, showing the 245 x 280 cm footprint	IG, Pinterest, TikTok
A8	Auroom Aurea LED sauna — Classic and Ascent, LED lighting on at dusk	IG hero, Pinterest, YouTube
A9	Auroom interior details: waxed alder bench, backrest, headrest, thermo-pine cladding macro	The Craft pillar, TikTok, IG
A10	Auroom VelAqua outdoor shower — matte black Damixa fittings macro, LED quartz shelf lit	IG, Pinterest, TikTok
A11	HUUM and Harvia heater product shots (electric and wood-burning)	The Guide, YouTube, carousel
A12	Röshults Essentials Set, Stainless Steel — full set with charcoal grill, sink, sideboard	IG, Pinterest, LinkedIn
A13	Röshults Essentials Set, Beluga Black — full set with gas grill, sink, sideboard	IG, Pinterest, FB
A14	Röshults Kitchen Island 4M Wall, Anthracite — full run, plus module close-ups (charcoal, gas, teak, sink)	LinkedIn, YouTube long-form, Pinterest
A15	Röshults Kitchen Island 5M Bar, SS316L — full run and bar-side seating view	LinkedIn, IG, Pinterest
A16	Röshults teak worktop and stainless steel surface macros	The Craft, TikTok
A17	EcoSmart Fire Nova 850 and Nova 600 — Natural, Bone, Graphite finishes	Pinterest, IG carousel
A18	EcoSmart Fire Mix 600 and Mix 850 circular bowls, lit at dusk	IG hero, TikTok, Pinterest
A19	EcoSmart Fire Pod 30 and Pod 40 — sculptural profile shots, Pod 40 with glass cover plate	Pinterest, LinkedIn
A20	EcoSmart Fire Stix and Stix 8 — the Hiroshi Tsunoda column form, stainless and matte black	IG, Pinterest, LinkedIn
A21	EcoSmart Fluid Concrete surface macro and burner detail (AB3 / AB8)	The Craft, YouTube
A22	Any approved brand lifestyle film clips (steam, flame, water) for Reels/Shorts/TikTok cutdowns	All video channels

2B. Must shoot yourself (VeldoraHaven original)

Grouped by shoot day. All video vertical 9:16 unless stated. Shoot in low, soft light — golden hour and blue hour do most of the work.

Shoot 1 — Sauna, dusk (one evening, one site)

- B1. Steam rolling off a cedar-toned barrel sauna at dusk, low angle from the ground, backlit so the steam glows. 9:16, 6–10 s.
- B2. Sauna door opening from inside, steam pouring out into cold air, camera static outside at chest height. 9:16, 4 s.

- B3. Hand pouring water onto hot stones, macro, water hitting stone and flashing to steam. 9:16, 3 s. Sound on — this is a hero clip.
- B4. Slow architectural pan across the full sauna exterior, tripod, left to right, 8 s. 16:9 and 9:16 crops.
- B5. Bench-level interior shot, empty bench, low warm light, shallow depth of field. 4:5 still.
- B6. Feet on the sauna step, towel, cold stone terrace, no faces. 9:16 still and 3 s clip.
- B7. Blue-hour wide of the whole garden with the sauna lit from inside — the "grid hero" still. 4:5.

Shoot 2 — Fire, blue hour

- B8. Flame igniting on a bioethanol burner, macro, first blue flame catching, 2 s. 9:16.
- B9. Fire bowl at blue hour with two lounge chairs, no people, wide. 4:5 still + 8 s pan.
- B10. Top-down of a lit circular bowl, symmetrical, flame centred. 4:5 still.
- B11. Rain or frost on an unlit concrete fire bowl surface, macro, water beading. 9:16, 4 s.
- B12. Hand placing the burner lid / snuffing tool, macro. 3 s.

Shoot 3 — Outdoor kitchen, daylight + evening

- B13. Stainless steel surface being wiped clean, single continuous stroke, macro, reflections moving. 9:16, 5 s.
- B14. Charcoal being lit in the grill, close, embers glowing. 9:16, 5 s.
- B15. Full kitchen run in flat morning light, straight-on elevation, tripod. 16:9 + 4:5.
- B16. Hands working on the teak worktop — cutting, plating. No faces. 9:16, 6 s.
- B17. Evening kitchen with task lighting on, wide, warm-cool contrast. 4:5.
- B18. Module-to-module joint detail, macro — how the run lines up. 9:16, 3 s.

Shoot 4 — Site, delivery and install reality (grab over the next 30 days, opportunistically)

- B19. Concrete slab / foundation being checked with a level, before the sauna arrives. 9:16.
- B20. Crate arriving on a truck tail-lift, no logos of unapproved third parties. 9:16, timelapse.
- B21. Install timelapse: empty terrace to finished sauna, fixed camera, 20–40 s compressed to 12 s.
- B22. Electrician's box / cable route shot for the electrics explainer — safe, tidy, real. 9:16 still.
- B23. Snow or frost on a sauna roof with steam rising — shoot the first cold morning you get. Highest-value winter asset.
- B24. Tape measure across a terrace, marking a sauna footprint. 9:16, 4 s.

Shoot 5 — Shower and water

- B25. VelAqua outdoor shower running, water column backlit, matte black fittings in frame. 9:16, 5 s.
- B26. LED quartz shelf lit at dusk, macro. 3 s.

- B27. Water hitting a cold stone terrace, slow motion, macro. 9:16, 3 s.

Stills you will reuse constantly (shoot extra): empty bench, steam, flame macro, steel macro, teak macro, terrace at blue hour.

3. Week-by-week calendar

Day 1 = start Monday. Pinterest pins are posted in batches on the days shown.

Week 1 — Arrival: the ritual, and the season turning

Day	Channel	Pillar	Format	Working title	Asset needed	Destination URL

4. The finished posts

4A. Instagram — 18 posts

IG-01 · Day 1 · Feed still 4:5 · Pillar: The Ritual

Asset: B7 (blue-hour wide, sauna lit from inside)

Hook: *September does not end the outdoor season. It starts the good one.*

Caption:

September does not end the outdoor season. It starts the good one.

Cold air is the other half of a sauna. It is what makes the heat mean something, and it is why Nordic wellness was never a summer idea. From now until March, the garden is at its best after dark.

We are VeldoraHaven. Premium Scandinavian outdoor living and wellness, shipped across Europe. Saunas by Auroom Wellness, outdoor kitchens by Röshults, fire by EcoSmart Fire.

Saunas: [veldorahaven.com/collections/saunas](https://www.veldorahaven.com/collections/saunas)

Hashtags: #OutdoorSauna #NordicWellness #udesauna #Saunakultur #ScandinavianDesign #OutdoorLiving

Destination URL: <https://www.veldorahaven.com/collections/saunas>

Alt text: An outdoor barrel sauna lit warmly from inside, seen across a dark garden terrace at blue hour.

Language variants: EN master only.

IG-02 · Day 2 · Carousel, 5 slides · Pillar: The Craft

Asset: A9, A1, A11

Hook: *A barrel sauna is four decisions, and only one of them is the shape.*

Per-slide copy:

- Slide 1 (A1, full exterior): *What a barrel sauna is actually made of.*
- Slide 2 (A9, cladding macro): *The shell. Auroom Halo is offered in Natural Wood or Brushed Black. Same build, two very different terraces.*
- Slide 3 (A9, bench macro): *The interior. Waxed alder benches. You feel this material before you notice it.*
- Slide 4 (A11, heater): *The heat source. Electric or wood-burning. HUUM or Harvia. This decision drives your electrics or your flue.*
- Slide 5 (A1, wide): *The assembly. Halo comes DIY or pre-assembled. Seven models, 28 variants. Configure it on the page.*

Caption:

A barrel sauna is four decisions, and only one of them is the shape.

Shell, interior, heat source, assembly. Get those right and the sauna disappears into the garden the way it should. Get the heat source wrong and you spend a year working around it.

Halo is Auroom's barrel range: seven models, Natural Wood or Brushed Black, DIY or pre-assembled. Swipe for the four decisions in order.

Full configuration: [veldorahaven.com/products/auroom-halo-barrel-sauna](https://www.veldorahaven.com/products/auroom-halo-barrel-sauna)

Hashtags: #BarrelSauna #AuroomWellness #tønndesauna #Fasssauna #NordicCraft #ThermoWood

Alt text: Five-slide carousel showing an Auroom Halo barrel sauna exterior, cladding and waxed alder bench close-ups, and a sauna heater.

Language variants: EN master only.

IG-03 · Day 4 · Reel, 18 s · Pillar: The Ritual

Asset: B1, B2

Hook (visual, 0.0–1.5 s): steam boiling off the barrel roof, backlit, no text yet.

Shot-by-shot script:

Time	Shot	On-screen text
0.0–1.5 s	B1 — low angle, steam rolling off the barrel at dusk, backlit	—
1.5–5.0 s	B1 continued, slow push in	Cold air is the other half.
5.0–9.0 s	B2 — door opens from inside, steam pours out	80 degrees in. Five degrees out.
9.0–13.0 s	B3 — water hitting hot stones, macro, sound on	This is the whole ritual.
13.0–16.0 s	B7 — blue-hour wide, sauna glowing	Auroom barrel saunas.
16.0–18.0 s	B7 held	veldorahaven.com

Audio: ambient only — steam hiss, water on stone, wind. No music bed needed. If music is used, keep it instrumental and low.

Caption:

Cold air is the other half of a sauna.

No music on this one. Just water hitting stone and steam leaving a cedar-toned barrel at dusk. Auroom barrel saunas: Halo, Luma, Sola, Nora.

[veldorahaven.com/collections/barrel-saunas](https://www.veldorahaven.com/collections/barrel-saunas)

Language variants: EN master. DA on-screen text alternative: "Kold luft er den anden halvdel." / "80 grader inde. Fem grader ude."

IG-04 · Day 5 · Feed still 4:5 · Pillar: The Product

Asset: A1 and A2 (split frame or two-image post)

Hook: *Natural Wood recedes. Brushed Black holds the frame.*

Caption:

Natural Wood recedes. Brushed Black holds the frame.

The same Auroom Halo, two finishes, two entirely different relationships with a garden. Natural Wood settles into planting and greys gently. Brushed Black reads as an object, and works best against render, stone or a dark facade.

Seven models, DIY or pre-assembled. Choose the finish for the garden you actually have, not the one in the render.

Language variants: EN master only.

IG-05 · Day 6 · Feed still 4:5 · Pillar: The Space

Asset: B9 (fire bowl at blue hour, two chairs, no people)

Hook: *Blue hour is the only lighting designer you need.*

Caption:

Blue hour is the only lighting designer you need.

A fire feature does two jobs at once: it warms a seating group and it gives the terrace a centre. EcoSmart Fire builds these in handcrafted Fluid Concrete and stainless steel, running on e-NRG bioethanol — no gas line, no chimney, no permit for the ethanol models.

Eight models live now, from the 600 mm bowls up to Pod 40 and Stix 8.

[veldorahaven.com/collections/fire-features](https://www.veldorahaven.com/collections/fire-features)

Hashtags: #EcoSmartFire #FirePit #bålsted #Feuerstelle #OutdoorLiving #ArchitecturalFire

Destination URL: <https://www.veldorahaven.com/collections/fire-features>

Alt text: A lit circular bioethanol fire bowl on a terrace at blue hour with two empty lounge chairs.

Language variants: EN master only.

IG-06 · Day 8 · Carousel, 4 slides · Pillar: The Craft

Asset: A11

Hook: *Electric or wood-burning is not a taste question. It is a building question.*

Per-slide copy:

- Slide 1: *Electric or wood-burning?*
- Slide 2 (HUUM/Harvia electric): *Electric. A switch, a timer, no flue. It needs an electrician and the correct supply. HUUM from one tier, Harvia from another — both live.*
- Slide 3 (HUUM/Harvia wood-burning): *Wood-burning. Slower, quieter, and the reason some people buy a sauna at all. It needs a flue, clearances and fuel storage.*
- Slide 4: *We list a wood-burning heater installation service as a separate line, because it is separate work. Ask us before you order the heater, not after.*

Caption:

Electric or wood-burning is not a taste question. It is a building question.

Electric gives you a timer and a predictable evening. Wood-burning gives you the sound and the smell, and asks for a flue, clearances and somewhere dry to keep the wood. Both are correct. They are just not interchangeable once the sauna is on the slab.

Heaters and accessories, including HUUM and Harvia in electric and wood-burning: [veldorahaven.com/collections/sauna-accessories](https://www.veldorahaven.com/collections/sauna-accessories)

245 by 280 centimetres. That is the whole footprint.

Arti is Auroom's compact outdoor sauna: thermo-spruce exterior, a full glass front, and a plan small enough for a normal city terrace or the end of a narrow garden. The glass is the point – it turns the sauna into a window rather than a box.

If space is the reason you have not built a sauna yet, start here.

Hook: *Four questions to answer before you look at a single sauna model.*

Caption:

Four questions to answer before you look at a single sauna model.

1. Where exactly will it stand? Mark the footprint out in tape on the actual terrace and leave it there for a weekend. You will move it at least once. Auroom Arti, for reference, is 245 x 280 cm.
2. What is under it? A sauna needs a level, load-bearing base. Level matters more than what the base is made of. If it is not level, the door will remind you every time you use it.
3. Electric or wood-burning? Electric needs the correct electrical supply installed by an electrician. Wood-burning needs a flue, clearances and somewhere dry to keep fuel. This is a building decision, not a preference.
4. How does it get in? Measure your narrowest gate and think about where a truck can stop. This is the question that surprises people most often.

Answer those four and choosing between Halo, Luma, Sola, Nora, Terra, Arti and Aurea becomes straightforward. Answer them afterwards and you rework something.

We are happy to go through all four with you before you buy anything:

Hook: *Halo is the sauna most people end up choosing, and here is why.*

Caption:

Halo is the sauna most people end up choosing, and here is why.

It is Auroom's outdoor barrel range: seven models, from compact two-person layouts up to the larger Comfy configurations. Two finishes — Natural Wood, which greys gently and disappears into planting, or Brushed Black, which holds its own against render and stone. And two ways to buy it: as a DIY kit, or pre-assembled.

That is 28 variants on one product page, which sounds like a lot until you realise it is really three decisions: how many people, which finish, and whether you want to build it.

The DIY route is genuinely doable for someone comfortable with a level and an afternoon of instructions. Pre-assembled removes that entirely, and it removes the risk of a badly seated door.

Halo starts from €7,625 including Danish VAT at 25% for a Danish delivery address. In Germany the same starting configuration is €7,259 including German VAT at 19%. Freight is quoted per

address — we do not publish a flat European shipping figure, because it would be wrong for most of the continent.

All seven models and both finishes: veldorahaven.com/products/auroom-halo-barrel-sauna

Hook: *Three things we will not tell you.*

Caption:

Three things we will not tell you.

We will not give you a lead time we cannot stand behind. Auroom saunas and Röshults kitchens are built to order, and the honest answer is that we confirm timing with the manufacturer for your specific configuration before we take money for it.

We will not quote a flat shipping price across Europe. These are large, heavy, crated goods. Freight to a Copenhagen suburb and freight to a village in the Austrian Alps are not the same number, and pretending otherwise is how customers get an unpleasant email later. We quote freight per address.

We will not tell you a sauna needs no preparation. It needs a level base, a decision about water, and either an electrician or a flue.

What we will do: name the exact model, finish and configuration; quote a price with your country's VAT rate on it; get the freight priced properly; and tell you what has to be ready before the truck arrives.

We are an authorised retailer for Auroom Wellness, and a partner of Röshults and EcoSmart Fire. Those three brands are the assortment. We would rather be deep in three than shallow in thirty.

FB-04 · Day 10 · Pillar: The Craft · Asset: A21, A17

URL: <https://www.veldorahaven.com/collections/fire-features>

Hook: *A fire bowl that weighs 49 kilos is telling you something.*

Caption:

A fire bowl that weighs 49 kilos is telling you something.

EcoSmart Fire builds in handcrafted Fluid Concrete and stainless steel. The Pod 40, for example, is 1001 x 1001 x 503 mm and 49 kg. Pod 30 is 762 x 762 x 350 mm and 38 kg. That mass is not decorative — it is what keeps a fire feature stable outdoors, stops it moving in wind, and lets the material take heat cycles and frost without cracking.

The fuel side is where most people are surprised. The ethanol models run on e-NRG bioethanol. That means no gas line, no chimney and no permit. You are not calling a gas fitter, and you are not building a flue. You fill the burner, you light it, and the burn time on a Pod is measured in hours, not minutes.

Burner sizes matter more than model names. An AB3 burner holds 2.6 litres, runs at 1.7 kW and suits outdoor spaces up to 20 m². An AB8 holds around 7.4 to 7.9 litres depending on the model, runs at 6.0 kW and covers up to 60 m². Choose by the size of your terrace, then choose the shape you like.

EcoSmart Fire is certified to EN 16647 in the EU and UK, UL 1370 in the USA and ACCC in Australia.

Hook: *What a four-metre outdoor kitchen actually looks like on a real terrace.*

Caption:

What a four-metre outdoor kitchen actually looks like on a real terrace.

The Röshults Kitchen Island 4M Wall in Anthracite is a four-metre run designed to sit against a wall. It combines a charcoal grill, a gas grill, a teak preparation module and a sink. That combination is the reason it works: charcoal for the long weekend cook, gas for the weekday, teak to actually put things down on, and a sink so you are not walking indoors with raw food in your hands.

Most outdoor kitchens fail on that last point. People buy a grill and then discover they have nowhere to prepare and nowhere to wash.

The 5M Bar is the other approach — five metres in marine-grade SS316L with a teak module and a Sink 100, with a bar side so people can sit at the kitchen rather than behind it. SS316L is the specification that matters if you are anywhere near salt air.

Both are made to order in Sweden. Both are a considered purchase, and both deserve a conversation about your terrace before you specify modules.

If you want something shorter, the Essentials sets give you grill, sink and sideboard in one compact run — stainless steel with a charcoal grill, or Beluga Black with a gas grill.

All four configurations: [veldorahaven.com/collections/outdoor-kitchens](https://www.veldorahaven.com/collections/outdoor-kitchens)

FB-06 · Day 14 · Pillar: The Guide · Asset: B19

URL: <https://www.veldorahaven.com/collections/saunas>

Hook: *The most expensive mistake in an outdoor sauna project happens before the sauna arrives.*

Caption:

The most expensive mistake in an outdoor sauna project happens before the sauna arrives.

It is the base. Not the material — concrete slab, paving, a properly built timber deck can all work. It is whether it is level, load-bearing and stays that way through a winter.

An outdoor sauna is heavy, and it gets heavier with people in it. If the base settles unevenly, the shell twists slightly. You will not see it. You will feel it in the door, which will stop closing cleanly, and then you will have a heat leak in the one place a sauna cannot afford one.

Second: drainage. Water arrives from three directions — the sky, the shower if you install one, and the sauna floor itself. Decide where it goes before anything is poured. Retrofitting drainage under a finished sauna means lifting the sauna.

Third: the supply. Electric heaters need the correct electrical supply, installed by a qualified electrician for your country's regulations. Wood-burning needs a flue, correct clearances and fuel storage. We list a wood-burning heater installation service separately because it is separate work.

Fourth: access. Measure the narrowest point between the road and the spot. Gate posts, side passages, low branches, steps.

None of this is glamorous, and all of it is cheaper on paper than on site. Bring us photos and rough measurements and we will go through it with you.

URL: <https://www.veldorahaven.com/collections/barrel-saunas>

Hook: *The Nordic sauna ritual, described honestly rather than romantically.*

Caption:

The Nordic sauna ritual, described honestly rather than romantically.

You heat the sauna. Depending on the heater and the model this takes a while, and that waiting is part of it — it is why sauna culture is unhurried. You sit. It gets uncomfortable before it gets good. You pour water on the stones and it gets briefly much worse. Then you leave, and the cold air hits you, and for about ninety seconds you feel better than you have all week.

Then you do it again. Usually two or three times.

That is the whole thing. There is no equipment beyond a sauna, water and cold air. The reason outdoor saunas belong in Northern Europe is that the cold air is free and reliable from October onwards.

Which is also why we would gently suggest that if you are planning a sauna, plan it for February rather than July. A sauna bought for summer gets used a handful of times. A sauna bought for winter gets used weekly for five months.

Auroom's barrel range — Halo, Luma with its covered porch, Sola and Nora in square form: [veldorahaven.com/collections/barrel-saunas](https://www.veldorahaven.com/collections/barrel-saunas)

FB-08 · Day 19 · Pillar: The Product · Asset: A5, A8

URL: <https://www.veldorahaven.com/collections/cabin-saunas>

Hook: *There is a point where a sauna stops being a garden building and becomes architecture.*

Caption:

There is a point where a sauna stops being a garden building and becomes architecture.

Aurea is the clearest example. Brushed thermo-radiata pine outside, waxed alder inside, and integrated LED lighting. Two versions, Classic and Ascent. In daylight it is a quiet, precise volume. At dusk it becomes the warmest thing in the garden and the light source everything else is arranged around. In Denmark, Aurea is €13,750 including Danish VAT at 25%.

Nora takes a different route to the same place. It keeps the thermal logic of a barrel sauna but with flat exterior walls, which means it can sit close to a boundary or a facade without the wasted space a curved shell creates. Two models. It reads as a considered building rather than an object dropped on the lawn.

Terra is the third option — modular, in Terra S and Terra M, thermo-pine in Natural or Black. Modular matters when the plot is awkward: a boundary at an angle, a level change, an existing terrace edge you do not want to demolish.

Three saunas, three different answers to the same question: how do you put a sauna in a garden without it looking like a shed?

Hook: *Made to order in Sweden. Here is what that actually changes for you.*

Caption:

Made to order in Sweden. Here is what that actually changes for you.

Röshults kitchens are not pulled off a shelf. Each configuration is built to order. There are three consequences worth knowing before you buy.

First, you get the configuration you specified rather than the nearest available one. Charcoal or gas. Stainless steel, Anthracite or Beluga Black. Teak module or not. Sink or not. Four metres against a wall or five metres with a bar side. That flexibility is the point of the system.

Second, it takes time. We will not print a number here, because the honest answer is that we confirm production timing with Röshults for your exact configuration. What we can promise is that you will have that confirmation before you commit, not after.

Third, it is a serious piece of stainless steel engineering, and it should be delivered like one. Freight is quoted per address for exactly that reason.

Made to order is not a delay. It is the reason the kitchen fits your terrace instead of approximately fitting it.

URL: <https://www.veldorahaven.com/pages/contact>

Hook: *Buying a sauna from another EU country: what to actually check.*

Caption:

Buying a sauna from another EU country: what to actually check.

We are based in Denmark and we ship across the EU and EEA. Three things matter, and they are all knowable in advance.

VAT. For a private buyer, the VAT that applies is your country's rate, not ours. Germany 19%, Netherlands 21%, France 20%, Belgium 21%, Sweden 25%, Austria 20%, Finland 25.5%, Denmark 25%. So the same sauna genuinely costs a different amount in Hamburg than in Aarhus, and the price you should be quoted is the one with your country's rate on it. Ask for that. Any retailer who quotes you one pan-European price is either absorbing the difference or getting it wrong.

Freight. These are crated, palletised, heavy goods. There is no honest flat rate across a continent. We quote freight to your specific address, and we would rather do that properly than surprise you.

Who does what on arrival. Kerbside delivery, moving the crate to the spot, the base, and the electrical or flue work are separate jobs. Establish which of them are yours before you order. For an electric sauna heater you will need a qualified electrician working to your own country's regulations — that is not something a Danish retailer can do for you in Bavaria.

Send us your address and the model you are considering and we will come back with a properly built quote: veldorahaven.com/pages/contact

Hashtags: #EUDelivery #OutdoorSauna #udesauna #Gartensauna #VeldoraHaven

Alt text: A crated delivery being lowered on a truck tail-lift outside a residential property.

FB-11 · Day 25 · Pillar: The Space · Asset: B7, B9

URL: <https://www.veldorahaven.com/pages/consultation>

Hook: *Most wellness gardens get built three times. It should be once.*

Caption:

Most wellness gardens get built three times. It should be once.

The usual sequence is: sauna this year, an outdoor shower two years later once you realise you need somewhere to cool off, and a fire feature the year after that once you notice you have nowhere to sit afterwards. Each stage means lifting paving, running a new cable or a new water line, and paying a trade to come back.

The ritual is heat, then cold, then stillness. So the garden needs three things: a sauna, water, and a warm place to sit. If you know that at the start, you get one drainage plan, one electrical plan, one paving plan and one delivery.

In practice that means deciding early: which sauna and which heater, because that sets the electrics or the flue. Whether the water is an outdoor shower like VelAqua, because that sets the plumbing and the drainage. And where the fire feature and its seating go, because a bioethanol fire bowl needs no gas line or chimney but it does need a considered position out of the prevailing wind.

We plan across all three categories in one consultation — Auroom, Röshults and EcoSmart Fire — and we will tell you honestly if the thing you want will not fit.

Hook: *Ask us the awkward questions. We prefer them.*

Caption:

Ask us the awkward questions. We prefer them.

Over the last month we have answered a lot of the same ones, so here they are with the honest version of each answer.

Is this real Auroom? Yes. We are an authorised Auroom Wellness retailer. Röshults and EcoSmart Fire are confirmed partners. Those three brands are the entire assortment.

How much is delivery? We quote it per address. We do not publish a flat European rate because it would be wrong for most addresses.

How long does it take? We confirm production and delivery timing with the manufacturer for your exact configuration before you commit. We will not invent a number to close a sale.

Can I use it in winter? That is when it is best. An outdoor sauna is a cold-weather product first.

Do I need three-phase power? Depends on the heater. That is a conversation with your electrician, and we will tell you what the heater requires so you can have it.

What about VAT if I am not in Denmark? Your country's rate applies, and you should be quoted with it.

Anything we have not covered, put it in the comments or book a consultation and we will answer it properly rather than vaguely: [veldorahaven.com/pages/consultation](https://www.veldorahaven.com/pages/consultation)

Shorts

YT-S01 · Day 2 · Pillar: The Guide

Title: Do You Need Three-Phase Power for an Outdoor Sauna?

Asset: A11, B22

Script (spoken, 38 s):

"Short answer: it depends entirely on the heater, and it is a question for your electrician, not for the internet. What we can tell you is what to ask. An electric sauna heater has a defined electrical requirement — you take that requirement to a qualified electrician working to your

own country's regulations, and they tell you what your supply can and cannot do. That is the correct order. Choose the heater, then confirm the supply, then pour the base. Do it the other way round and you will be routing a new cable through finished paving. We stock HUUM and Harvia in electric and wood-burning versions. If you want to avoid the electrical question altogether, wood-burning is the alternative — but it brings a flue, clearances and fuel storage instead. There is no version of this where you skip the building question."

On-screen text: "Choose the heater first." / "Then confirm the supply." / "Then pour the base."

Description:

Electric sauna heaters have a defined electrical requirement, and it must be confirmed by a qualified electrician working to your own country's regulations. This Short explains the correct order: choose the heater, confirm the supply, then prepare the base.

Heaters and accessories, including HUUM and Harvia in electric and wood-burning versions, plus a separate wood-burning heater installation service: <https://www.veldorahaven.com/collections/sauna-accessories>

YT-S03 · Day 7 · Pillar: The Guide

Title: The One Measurement People Forget When Buying an Outdoor Sauna

Asset: B24, B20

Script (30 s):

"Everyone measures the terrace. Almost nobody measures the gate. An outdoor sauna arrives crated and palletised, and it has to travel from wherever the truck can legally stop to wherever

it is going to stand. So measure the narrowest point on that route. Gate posts. Side passages. Steps. Low branches. Then think about turning circles, because a long crate does not corner. If that route is genuinely too tight, it is not the end of the project — it just changes the delivery method and the cost, and it is far better known now than on the day. Send us photos of the access route with your enquiry and we will flag anything obvious."

On-screen text: "Measure the terrace." / "Then measure the gate." / "Then the turning circle."

Description:

The measurement most people skip when buying an outdoor sauna is the access route, not the terrace. Saunas arrive crated and palletised and have to get from the truck to the spot. Measure the narrowest point, including gate posts, steps and turning circles.

YT-S04 · Day 9 · Pillar: The Product

Title: An Outdoor Sauna That Fits a Small Terrace — Auroom Arti

Asset: A7

Script (32 s):

"If space is the reason you have not built a sauna, this is the model to look at. Auroom Arti has a footprint of 245 by 280 centimetres. That fits a normal city terrace or the end of a narrow garden. The exterior is thermo-spruce, and the front is glass, full height. The glass is doing real work here — in a sauna this small, a solid wall would feel like a box, and a glass front turns it into a window. You still need the same four things any outdoor sauna needs: a level base, a drainage decision, the right supply, and an access route. But the footprint stops being the obstacle."

On-screen text: "245 x 280 cm." / "Thermo-spruce." / "Full glass front."

Description:

Auroom Arti is a compact outdoor designer sauna with a 245 x 280 cm footprint, a thermo-spruce exterior and a full-height glass front — designed for small terraces and narrow gardens.

Auroom Arti: <https://www.veldorahaven.com/products/auroom-arti-compact-outdoor-designer-sauna>

YT-S05 · Day 11 · Pillar: The Ritual

Title: The Outdoor Shower Nobody Plans For — And Then Needs

Asset: B25, B26, A10

Script (34 s):

"The sauna ritual is heat, then cold, then stillness. Most people plan the heat and forget the

cold, and then spend a year rigging a garden hose to a wall. You do not need a large installation to close that loop. An outdoor shower does most of the work, and unlike a lot of wellness equipment it stays useful all year — after the garden, after the beach, after the dog. Auroom's VelAqua is built in Thermory thermo-spruce with matte black Damixa fittings and an LED quartz shelf. It is a finished object rather than a plumbing improvisation. Plan it at the same time as the sauna, because the water line and the drainage are the same conversation."

On-screen text: "Heat. Cold. Stillness." / "Plan the cold part." / "VelAqua."

Description:

Most sauna projects plan the heat and forget the cold. An outdoor shower closes the loop without a large installation, and stays useful all year. Auroom VelAqua is built in Thermory thermo-spruce with matte black Damixa fittings and an LED quartz shelf.

VelAqua outdoor wellness shower: <https://www.veldorahaven.com/products/auroom-velaqua-premium-outdoor-shower>

YT-S06 · Day 13 · Pillar: The Craft

Title: Why Outdoor Kitchens Use Teak and Marine-Grade Stainless Steel

Asset: A16, B13

Script (33 s):

"Two materials do almost all the work in a serious outdoor kitchen. Teak, because it handles wet and dry cycles without splitting and does not need to be sealed to survive. And stainless steel — but not just any stainless steel. The Röshults Kitchen Island 5M Bar is built in marine-grade SS316L. That grade is the one that matters if you are anywhere near salt air, whether that is a coast or a road that gets salted in winter. Cheaper grades will look identical on the day it is installed. The difference shows up in year three. Both Röshults kitchens are made to order in Sweden, which is also why you can specify the modules rather than accept a fixed set."

On-screen text: "Teak." / "Marine-grade SS316L." / "The difference shows in year three."

Description:

Teak and marine-grade SS316L are the two materials that make an outdoor kitchen survive. SS316L is the specification that matters near salt air. The Röshults Kitchen Island 5M Bar is built in SS316L with a teak module and a Sink 100, made to order in Sweden.

YT-S07 · Day 16 · Pillar: The Product

Title: Auroom Terra S or Terra M — Which Modular Sauna Size

Asset: A6

Script (31 s):

"Terra is Auroom's modular outdoor sauna, and it comes in two sizes: Terra S and Terra M. The exterior is thermo-pine, in Natural or Black. The interior is waxed alder. The reason to choose Terra over a barrel is not size — it is geometry. Modular means the sauna can follow a boundary at an angle, a level change, or the edge of an existing terrace, instead of demanding a clear rectangle. If your plot is awkward, that is worth more than any spec on the page. Choose S when the sauna is for two or three people and the space is genuinely tight. Choose M when you want the bench length to work for more than two."

On-screen text: "Terra S." / "Terra M." / "Modular follows the site."

Description:

Auroom Terra is a modular outdoor sauna in two sizes, Terra S and Terra M, with a thermo-pine exterior in Natural or Black and a waxed alder interior. Modular geometry lets the sauna follow a boundary or a level change.

Auroom Terra: <https://www.veldorahaven.com/products/auroom-terra-modular-outdoor-sauna>

YT-S08 · Day 18 · Pillar: The Guide

Title: How Long Does a Bioethanol Fire Pit Actually Burn?

Asset: A21, A17, A18

Script (36 s):

"It depends on the burner, and the burner is the number to look at — not the model name. An AB3 burner holds 2.6 litres. On the Nova 600 and the Mix 600 that gives 8 to 11 hours, at 1.7 kilowatts, and suits an outdoor space up to 20 square metres. An AB8 burner is the larger one. On the Nova 850 it holds 7.4 litres at 6 kilowatts for 7 to 11 hours. On the Mix 850 and Stix 8 it holds 7.9 litres at 6 kilowatts for 7 to 9 hours, covering up to 60 square metres. So a single fill covers an entire evening, comfortably. Fuel is e-NRG bioethanol. No gas line, no chimney, and no permit for the ethanol models."

On-screen text: "AB3 — 2.6 L — 1.7 kW — 8 to 11 h" / "AB8 — up to 7.9 L — 6.0 kW — 7 to 11 h" / "One fill, one evening."

Description:

Bioethanol burn time depends on the burner, not the model name. AB3 holds 2.6 litres at 1.7 kW for 8 to 11 hours, suited to spaces up to 20 m². AB8 holds 7.4 to 7.9 litres depending on model, at 6.0 kW, for 7 to 11 hours, covering up to 60 m². Fuel is e-NRG bioethanol. No gas line, no chimney, and no permit for the ethanol models. EcoSmart Fire is certified to EN 16647 in the EU and UK, UL 1370 in the USA and ACCC in Australia.

YT-S10 · Day 23 · Pillar: The Product

Title: Charcoal or Gas for an Outdoor Kitchen — Röshults Essentials Set

Asset: A12, A13

Script (35 s):

"The Röshults Essentials Set is the shortest complete outdoor kitchen we sell — a grill, a sink and a sideboard. It comes two ways. Stainless Steel with a charcoal grill, or Beluga Black with a gas grill. Charcoal is the ritual version: it takes time, it rewards attention, and it is what you want on a Saturday. Gas is the version that gets used on a Tuesday in October when you have forty minutes. If you cook outdoors more than once a week, gas is honestly the one that earns its place. If outdoor cooking is the event rather than the routine, take charcoal. And if you want both, that is what the four- and five-metre kitchen islands are for — they carry a charcoal grill and a gas grill in the same run."

On-screen text: "Stainless Steel + charcoal." / "Beluga Black + gas." / "Or both, in a 4M or 5M island."

Description:

The Röshults Essentials Set is a complete short outdoor kitchen: grill, sink and sideboard. Available in Stainless Steel with a charcoal grill, or Beluga Black with a gas grill. The 4M Wall and 5M Bar kitchen islands carry both grill types in one run.

Outdoor kitchens: <https://www.veldorahaven.com/collections/outdoor-kitchens>

Localized titles: DA "Kul eller gas i udekøkkenet — Röshults Essentials Set" · DE "Holzkohle oder Gas in der Außenküche — Röshults Essentials Set"

YT-S11 · Day 24 · Pillar: The Guide

Title: Can You Use an Outdoor Sauna in Winter?

Asset: B23, B1, B6

Script (33 s):

"Yes — and winter is when it is best. An outdoor sauna works on contrast. Heat inside, cold air

outside, and the swing between them is the entire mechanism. In July that swing is small and the sauna feels like a warm room. In February it is enormous, and twenty minutes does something a summer session cannot. Practically: the sauna takes longer to reach temperature in the cold, so allow for that. Clear snow off the roof and the door area. Keep the path to the door safe, because you will be walking it barefoot. And if you have an outdoor shower, keep it protected from freezing according to your installer's advice. None of that is difficult. It is just the reason we tell people to plan a sauna for February, not for the first warm weekend in May."

On-screen text: "Winter is the point." / "Allow longer to heat." / "Clear the roof and the path."

Description:

Outdoor saunas work best in winter, because the contrast between the heat inside and the cold air outside is the whole mechanism. Practical notes: allow longer heat-up time in the cold, clear snow from the roof and doorway, and keep the barefoot path safe.

YT-S12 · Day 26 · Pillar: The House

Title: What We Can Quote Immediately, and What We Cannot

Asset: B20, B15

Script (37 s):

"Being clear about this saves everyone time. What we can give you immediately: the exact model, finish and configuration; the price with your own country's VAT rate applied, because in the EU the destination rate is the one that counts; and the verified specifications straight from the manufacturer's documentation. What we cannot give you immediately: freight, and timing. Freight on a crated sauna or a made-to-order stainless steel kitchen is not a flat European number — we quote it to your specific address, because anything else is a guess that gets corrected later in an awkward email. Timing we confirm with the manufacturer for your exact configuration before you commit. We would rather tell you that than invent a date. Send the model and the delivery address and you get a real quote."

On-screen text: "Immediately: model, spec, price with your VAT." / "Quoted per address: freight." / "Confirmed with the manufacturer: timing."

Description:

What VeldoraHaven can confirm immediately: exact model and configuration, verified manufacturer specifications, and a price with your own country's VAT rate applied. What we quote rather than publish: freight, which is priced per delivery address, and production timing, which we confirm with the manufacturer for your exact configuration before you commit.

Hook: *We carry three brands. That is a specification decision, not a limitation.*

Post:

We carry three brands. That is a specification decision, not a limitation.

VeldoraHaven is an authorised Auroom Wellness retailer, and a partner of Röshults and EcoSmart Fire. Saunas and outdoor wellness, outdoor kitchens, and bioethanol fire features. Nothing else.

For specifiers, a narrow portfolio has a practical benefit: we can answer detail questions without going back to a distributor. Bench materials, module combinations, burner capacities, finish behaviour over time, what has to be on the drawing before the base is poured. That is the level at which most outdoor wellness and outdoor kitchen projects go wrong — not at concept, but at the point where a beautiful plan meets a drainage run and an electrical supply.

We work with architects, landscape architects, developers and hospitality operators across the EU and EEA. Freight is quoted per delivery address. Production timing is confirmed with the manufacturer per configuration before commitment. We do not publish figures we cannot stand behind.

If you have a scheme with an outdoor wellness or outdoor cooking element, we are happy to be brought in early: [veldorahaven.com/pages/consultation](https://www.veldorahaven.com/pages/consultation)

URL: <https://www.veldorahaven.com/collections/fire-features>

Hook: *Specifying fire without a gas line, a flue or a permit.*

Post:

Specifying fire without a gas line, a flue or a permit.

For terrace and courtyard schemes, the servicing requirement is usually what kills a fire feature at technical design stage. A gas line means a route, a fitter and a certificate. A solid-fuel feature means a flue and a planning conversation.

EcoSmart Fire's ethanol models remove all three. They run on e-NRG bioethanol: no gas connection, no chimney, and no permit for the ethanol models. That changes what is possible

on a roof terrace, a courtyard, a balcony with the right conditions, or a listed context where a flue is not going to be approved.

The specification detail that matters is the burner, not the model name:

— AB3: 2.6 L, 1.7 kW, 8 to 11 hours per fill, suited to outdoor spaces up to 20 m². Used in Nova 600, Mix 600 and Stix.

— AB8: 7.4 to 7.9 L depending on model, 6.0 kW, 7 to 11 hours per fill, up to 60 m². Used in Nova 850, Mix 850, Pod 30, Pod 40 and Stix 8.

Pod 30 and Pod 40 are also available as gas versions at 19 kW where a gas supply already exists.

Construction is handcrafted Fluid Concrete or stainless steel. Certification: EN 16647 for the EU and UK, UL 1370 for the USA, ACCC for Australia.

Eight models are available now: [veldorahaven.com/collections/fire-features](https://www.veldorahaven.com/collections/fire-features)

Hook: *Wellness has become a specifiable amenity rather than a lifestyle extra.*

Post (EN master):

Wellness has become a specifiable amenity rather than a lifestyle extra.

In residential development and in hospitality, an outdoor sauna now behaves the way a good kitchen specification does: it is a line item that measurably changes how a scheme is perceived. The difference is that it needs to be on the drawing early, because it carries a base, a drainage decision and either an electrical supply or a flue.

What we would ask a specifier to fix at technical design rather than at handover:

— Footprint and orientation. Auroom Arti, for instance, is 245 x 280 cm — small enough for a courtyard unit, but the door swing and the cooling-off space still need to be drawn.

— Heat source. Electric requires a defined supply and a qualified electrician working to local regulations. Wood-burning requires a flue and clearances.

— Whether a cold-water element is included. If it is, the water and drainage runs are the same conversation as the sauna, not a later one.

— Access for delivery. Crated goods, palletised.

Auroom's outdoor range spans barrel models, square barrels, and cabin formats including the modular Terra and the LED-integrated Aurea. Modular formats are usually the right answer on constrained or irregular plots.

- **DE:** Wellness ist heute eine planbare Ausstattung, kein Lifestyle-Extra. Im Wohnungsbau und in der Hotellerie verhält sich eine Außensauna wie eine gute Küchenspezifikation: eine Position, die messbar verändert, wie ein Projekt wahrgenommen wird. Der Unterschied ist, dass sie früh in die Planung muss – sie bringt einen Untergrund, eine Entwässerungsentscheidung und entweder einen Stromanschluss oder ein Rauchrohr mit. Was in der Ausführungsplanung geklärt sein sollte: Grundfläche und Orientierung (Auroom Arti misst 245 x 280 cm, doch Türanschlag und Abkühlbereich müssen gezeichnet werden), die Wärmequelle (Elektro erfordert einen definierten Anschluss und eine Elektrofachkraft nach lokalem Regelwerk, Holz ein Rauchrohr und Sicherheitsabstände), ob ein Kaltwasserelement dazugehört, und der Zugang für die Anlieferung verpackter Ware auf Palette. Aurooms Außenprogramm umfasst Fassmodelle, eckige Fassmodelle sowie Kabinenformate wie das modulare Terra und das LED-integrierte Aurea. Auf beengten oder unregelmäßigen Grundstücken ist meist das modulare Format die richtige Antwort.

Hook: *SS316L versus SS304 is the only outdoor kitchen material argument worth having.*

Post:

SS316L versus SS304 is the only outdoor kitchen material argument worth having.

On the day of handover they look the same. The difference appears in coastal and de-icing-salt environments, over years, and by then it is a warranty conversation rather than a specification one.

The Röshults Kitchen Island 5M Bar is built in marine-grade SS316L, with a teak module and a Sink 100. Five metres, with a bar side so the kitchen can be occupied from both sides – which matters in hospitality, where the cook is part of the experience rather than hidden behind the run.

The 4M Wall in Anthracite is the against-the-wall alternative, combining a charcoal grill, a gas grill, a teak preparation module and a sink in four metres.

Both are made to order in Sweden, which is the point for specifiers: the module order is yours to define, not ours to supply from stock. It also means production timing is confirmed per configuration, and we confirm it with Röshults before a client commits.

For coastal residential, waterfront hospitality and any exposed roof terrace, specify SS316L and stop thinking about it.

Hook: *The smallest viable outdoor spa footprint for a hospitality scheme.*

Post:

The smallest viable outdoor spa footprint for a hospitality scheme.

We are asked this often by boutique hotel and small-lodge operators: what is the minimum outdoor wellness offer that guests will actually recognise as a spa, rather than as an amenity gesture?

In practice, three elements:

1. A sauna. Auroom Arti sits on a 245 x 280 cm footprint with a full glass front, which is small enough for a courtyard or a gap between buildings. Terra, in Terra S and Terra M, is modular, which is usually the better answer where the site is irregular or where the sauna has to align to an existing terrace edge.
2. A cold-water element. An outdoor shower is sufficient to complete the ritual. Auroom VelAqua is a finished object in Thermory thermo-spruce with matte black Damixa fittings — relevant because in a guest-facing context, an improvised shower undermines the whole proposition.
3. A warm place to sit afterwards. A bioethanol fire feature with seating. No gas line, no chimney, no permit for the ethanol models, which is often the deciding factor on an existing building.

The planning consequences are the ones to bring forward: a level load-bearing base, one drainage strategy for all three elements, the electrical supply or the flue, and delivery access.

We work with operators across the EU and EEA. Freight quoted per address; timing confirmed per configuration with the manufacturer.

URL: <https://www.veldorahaven.com/products/ecosmart-fire-stix-8-large-bioethanol-fire-pit>

Hook: *Sculptural fire for semi-public terraces, without a gas connection.*

Post:

Sculptural fire for semi-public terraces, without a gas connection.

For restaurant terraces, hotel courtyards and shared amenity decks, a fire feature has to do two things at once: hold a space visually, and survive a servicing review.

Stix, designed by Hiroshi Tsunoda, is a vertical form: 556 x 556 x 780 mm, 23 kg, AB3 burner at 2.6 L and 1.7 kW, 8 to 11 hours per fill, suited to spaces up to 20 m². Available in stainless steel or black. The vertical geometry is useful where floor area is charged by the square metre and the flame needs to be visible from standing height.

Stix 8 is the larger version: 792 x 792 x 1085 mm, 31 kg, AB8 burner at 7.9 L and 6.0 kW, 7 to 9 hours per fill, up to 60 m², in matte black.

For horizontal schemes, Pod 40 is 1001 x 1001 x 503 mm and 49 kg, available as ethanol at 6.0 kW or gas at 19 kW, with an optional glass cover plate that converts it to a surface when unlit.

All ethanol models: no gas line, no chimney, no permit. Certification EN 16647 for the EU and UK.

LI-07 · Day 22 · Pillar: The Guide · Market-targeted: Denmark · Asset: B22, A11

URL: <https://www.veldorahaven.com/pages/consultation>

Hook: *A specifier's checklist for an outdoor sauna package.*

Post (EN master):

A specifier's checklist for an outdoor sauna package. Seven items, in the order they should be resolved.

1. Footprint, orientation and door swing. Include the cooling-off area — a sauna without somewhere to stand outside it does not work.
2. Base. Level and load-bearing, and it must remain so through a freeze-thaw cycle. Level matters more than the material.
3. Drainage strategy covering roof water, floor water and any cold-water element, resolved once rather than three times.
4. Heat source and its consequence. Electric heaters carry a defined electrical requirement and must be installed by a qualified electrician to local regulations. Wood-burning carries a flue, clearances and fuel storage. HUUM and Harvia are available in both types; wood-burning installation is a separate service line.
5. Materials and finish behaviour. Auroom uses thermo-treated softwood exteriors with waxed alder interiors. Natural finishes will weather; Brushed Black and Black hold their appearance differently. Specify with the client's maintenance expectation in writing.

6. Delivery access. Crated and palletised. Narrowest point, turning circle, and where a vehicle can legally stop.
7. Commercial certainty. Freight is quoted per delivery address. Production and delivery timing is confirmed with the manufacturer per configuration. For EU B2C sales the destination country's VAT rate applies, so a price is only meaningful with a country attached to it.

Happy to sit in on a technical design review: [veldorahaven.com/pages/consultation](https://www.veldorahaven.com/pages/consultation)

Hashtags: #specification #architecture

Alt text: A tidy electrical cable route on a wall beside a sauna heater installation.

Language variants:

- **DA:** Tjekliste til et udesauna-projekt – syv punkter i den rækkefølge, de bør afklares. 1. Fodafttryk, orientering og døråbning, inklusive afkølingsarealet. 2. Fundament: plant og bærende, og det skal blive det gennem en frostperiode. Planhed betyder mere end materialet. 3. Én afløbsstrategi for tagvand, gulvvand og et eventuelt koldt vandselement – løst én gang, ikke tre. 4. Varmekilde og konsekvens: elektriske ovne har et defineret elkrav og skal installeres af en autoriseret elektriker efter lokale regler; brændefyring kræver skorstensrør, afstandskrav og brændeopbevaring. HUUM og Harvia fås i begge typer, og montering af brændefyrede ovne er en separat ydelse. 5. Materialer og patinerings: Auroom bruger termobehandlet nåletræ udenpå og vokset el indenfor. Naturlige finish patinerer; Brushed Black og Black holder udseendet anderledes. Aftal kundens vedligeholdelsesforventning skriftligt. 6. Adgang for levering: pakket og palleteret gods – smalleste punkt, vendediameter og hvor en bil lovligt kan holde. 7. Kommerciel sikkerhed: fragt prissættes pr. leveringsadresse, produktions- og leveringstid bekræftes med producenten pr. konfiguration, og ved B2C-salg i EU gælder destinationslandets momsats – en pris er derfor kun meningsfuld med et land knyttet til den.

LI-08 · Day 26 · Pillar: The House · Asset: A15

URL: <https://www.veldorahaven.com/pages/consultation>

Hook: *How we work with specifiers, stated plainly.*

Post:

How we work with specifiers, stated plainly.

What we provide:

- Manufacturer documentation and verified specifications for Auroom Wellness, Röshults and EcoSmart Fire. Not marketing summaries – the actual technical data.
- Configuration support. Module orders for Röshults kitchen runs, model and heater selection for Auroom saunas, burner sizing for EcoSmart Fire.
- Pricing with the destination country's VAT rate applied and named, because in EU B2C trade the destination rate is the one that applies.
- Freight quoted to the delivery address.
- Production and delivery timing confirmed with the manufacturer for the exact

configuration, before the client commits.

– Delivery across the EU and EEA.

What we do not do:

– Publish a flat European freight rate. It would be wrong for most addresses.

– State a lead time we have not confirmed for that configuration.

– Carry out electrical work. Electric sauna heaters must be installed by a qualified electrician working to local regulations, and we will give you the heater requirement so that can be specified properly.

– Claim relationships we do not have. Auroom Wellness, Röshults and EcoSmart Fire are the portfolio.

If you are working on a residential, hospitality or wellness scheme with an outdoor element, bring us in at technical design rather than at procurement. It is cheaper for your client.

Dansk: #udeliv #wellnesshave #nordiskdesign #skandinaviskudeliv #premiumudeliv

Deutsch: #Außenwohnen #Wellnessgarten #nordischesDesign #skandinavischesWohnen #PremiumOutdoorliving

Note: avoid #sauna alone on Instagram and TikTok — it is heavily diluted. Always pair it with a market-language or category-specific tag.

6. First 10 comments and DMs — approved reply library

Rules for every reply: answer in the customer's language, in brand voice, within the day. Never invent a price, a lead time, a freight cost or a delivery guarantee. Where the honest answer is "we quote per address" or "book a consultation", say exactly that. Escalate anything involving a complaint, a fault, a safety concern or a legal or press enquiry — draft and hold, do not improvise.

Q1. "How much is it?"

EN: Thank you for asking. The price depends on the model, the finish and the configuration, and in the EU it also depends on your country, because the destination country's VAT rate applies. Every product page shows the price, and if you tell us your country and the model you are looking at, we will confirm the exact figure with the correct VAT rate. As an example, the Auroom Halo barrel sauna starts from €7,625 including Danish VAT at 25% for a Danish delivery address; in Germany that same starting configuration is €7,259 including German VAT at 19%. Freight is quoted separately, per address.

DA: Tak for spørgsmålet. Prisen afhænger af model, finish og konfiguration — og inden for EU også af dit land, fordi destinationslandets momssats gælder. Prisen står på hver produktside, og hvis du oplyser land og model, bekræfter vi det præcise beløb med den rigtige moms. Til eksempel: Auroom Halo tøndesauna starter fra 7.625 € inkl. 25 % dansk moms ved levering i Danmark. Fragt prissættes separat pr. adresse.

DE: Danke für Ihre Frage. Der Preis hängt von Modell, Ausführung und Konfiguration ab — und innerhalb der EU auch von Ihrem Land, da der Mehrwertsteuersatz des Bestimmungslandes

gilt. Auf jeder Produktseite steht der Preis; nennen Sie uns Land und Modell, und wir bestätigen den genauen Betrag mit dem korrekten Steuersatz. Beispiel: Die Auroom Halo Fasssauna beginnt bei 7.259 € inkl. 19 % deutscher MwSt. bei Lieferung nach Deutschland. Die Fracht wird separat, pro Adresse, kalkuliert.

Q2. "How much is delivery / shipping?"

EN: We quote freight per delivery address rather than publishing a flat rate. These are crated, palletised goods, and the honest cost to a suburb near a motorway and to a village in the mountains are not the same number. Send us the model and your full delivery address and we will come back with a proper freight figure rather than an estimate that changes later.

DA: Vi prissætter fragt pr. leveringsadresse i stedet for at opgive en fast sats. Der er tale om pakket, palleteret gods, og den reelle pris til en forstad tæt på motorvejen og til en landsby i bjergene er ikke det samme beløb. Send os model og fuld leveringsadresse, så vender vi tilbage med en rigtig fragtpriis — ikke et skøn, der ændrer sig senere.

DE: Wir kalkulieren die Fracht pro Lieferadresse und veröffentlichen keine Pauschale. Es handelt sich um verpackte Palettenware, und die tatsächlichen Kosten in einen Vorort an der Autobahn und in ein Bergdorf sind nicht dieselben. Senden Sie uns Modell und vollständige Lieferadresse, dann erhalten Sie einen echten Frachtpreis statt einer Schätzung, die sich später ändert.

Q3. "Do you install it, or do I?"

EN: It depends on what you order. Auroom Halo, for example, is available as a DIY kit or pre-assembled, so that part is your choice. Beyond the sauna itself, the base, the drainage and the electrical or flue work are separate jobs. We list a wood-burning heater installation service as its own line. Electrical work must be carried out by a qualified electrician working to your own country's regulations. Tell us your address and what you are considering, and we will set out clearly which parts we cover and which you will need locally.

DA: Det afhænger af, hvad du bestiller. Auroom Halo fås for eksempel som byggesæt eller færdigmonteret, så den del er dit valg. Ud over selve saunaen er fundament, afløb og el- eller skorstensarbejde separate opgaver. Vi har montering af brændefyret oven som en selvstændig ydelse. Elarbejde skal udføres af en autoriseret elektriker efter reglerne i dit land. Oplys adresse og hvad du overvejer, så beskriver vi tydeligt, hvad vi dækker, og hvad du skal have lokalt.

DE: Das hängt davon ab, was Sie bestellen. Auroom Halo ist zum Beispiel als Bausatz oder vormontiert erhältlich — das ist Ihre Wahl. Neben der Sauna selbst sind Untergrund, Entwässerung und Elektro- oder Rauchrohrarbeiten separate Leistungen. Die Montage eines Holzofens führen wir als eigene Position. Elektroarbeiten müssen von einer qualifizierten Elektrofachkraft nach dem Regelwerk Ihres Landes ausgeführt werden. Nennen Sie uns Adresse und Modell, dann legen wir klar dar, was wir abdecken und was Sie lokal brauchen.

Q4. "What power supply does it need? Do I need three-phase?"

EN: That is set by the heater, not by the sauna shell, and it has to be confirmed by a qualified electrician for your property and your country's regulations. What we will do is give you the exact electrical requirement of the heater you choose, in writing, so your electrician can confirm what your supply allows. If you would rather avoid the electrical question entirely, wood-burning heaters from HUUM and Harvia are an alternative — but they require a flue, correct clearances and fuel storage instead.

DA: Det afgøres af ovnen, ikke af saunaen selv, og det skal bekræftes af en autoriseret elektriker ud fra din ejendom og reglerne i dit land. Vi giver dig det præcise elkrav for den ovn, du vælger, skriftligt, så din elektriker kan vurdere din forsyning. Vil du helt undgå elspørgsmålet, er brændefyrede ovne fra HUUM og Harvia et alternativ — men de kræver til gengæld skorstensrør, korrekte afstande og brændeopbevaring.

DE: Das bestimmt der Ofen, nicht die Saunakabine, und es muss von einer qualifizierten Elektrofachkraft für Ihr Objekt und das Regelwerk Ihres Landes bestätigt werden. Wir liefern Ihnen die genaue elektrische Anforderung des gewählten Ofens schriftlich, damit Ihre Fachkraft Ihren Anschluss prüfen kann. Wenn Sie die Elektrofrage ganz vermeiden möchten, sind Holzöfen von HUUM und Harvia eine Alternative — sie erfordern dafür Rauchrohr, korrekte Abstände und Brennholzlagerung.

Q5. "Can I use it in winter?"

EN: Yes, and winter is when an outdoor sauna is at its best. The contrast between the heat inside and the cold air outside is the whole mechanism. Practically: allow longer to reach temperature in cold weather, keep snow clear of the roof and the doorway, and keep the barefoot route to the door safe. If you install an outdoor shower, follow your installer's advice on protecting it from freezing.

DA: Ja — og vinteren er netop, når en udesauna er bedst. Kontrasten mellem varmen indenfor og den kolde luft udenfor er hele mekanismen. Praktisk: regn med længere opvarmningstid i kulden, hold tag og indgang fri for sne, og hold ruten til døren sikker, når man går barfodet. Har du en udebruser, følg din installatørs anvisning om frostsikring.

DE: Ja — im Winter ist eine Außensauna am besten. Der Kontrast zwischen der Hitze innen und der kalten Luft außen ist der ganze Mechanismus. Praktisch: rechnen Sie in der Kälte mit längerer Aufheizzeit, halten Sie Dach und Eingang schneefrei und den barfüßigen Weg zur Tür sicher. Bei einer Außendusche folgen Sie der Frostschutzempfehlung Ihres Installateurs.

Q6. "What is the lead time / when would I get it?"

EN: We will not give you a number we have not confirmed. Auroom saunas and Röshults kitchens are built to order, so we confirm production and delivery timing with the manufacturer for your exact configuration before you commit — not after. Tell us the model, the finish and your delivery address, and getting that confirmation is the first thing we do.

DA: Vi giver dig ikke et tal, vi ikke har bekræftet. Auroom-saunaer og Röshults-køkkener produceres på ordre, så vi bekræfter produktions- og leveringstid med producenten for netop din konfiguration, før du binder dig — ikke bagefter. Oplys model, finish og leveringsadresse, så er den bekræftelse det første, vi henter.

DE: Wir nennen Ihnen keine Zahl, die wir nicht bestätigt haben. Auroom-Saunen und Röshults-Küchen werden auf Bestellung gefertigt. Wir bestätigen Produktions- und Lieferzeit mit dem Hersteller für genau Ihre Konfiguration, bevor Sie sich festlegen — nicht danach. Nennen Sie Modell, Ausführung und Lieferadresse; diese Bestätigung holen wir als Erstes ein.

Q7. "How does VAT work if I am not in Denmark?"

EN: For a private buyer inside the EU, the VAT rate of your own country applies, not ours. So the same sauna is a different final price in Munich than in Aarhus. Current standard rates for reference: Denmark 25%, Sweden 25%, Germany 19%, Netherlands 21%, France 20%, Belgium 21%, Austria 20%, Finland 25.5%. Tell us your country and we will quote you with the correct rate applied and named. If you are a business with a valid VAT number, mention that in your enquiry and we will handle it accordingly.

DA: For en privatkunde inden for EU gælder momssatsen i dit eget land, ikke vores. Den samme sauna har derfor en anden slutpris i München end i Aarhus. Gældende standardsatser til reference: Danmark 25 %, Sverige 25 %, Tyskland 19 %, Holland 21 %, Frankrig 20 %, Belgien 21 %, Østrig 20 %, Finland 25,5 %. Oplys dit land, så giver vi prisen med den korrekte sats anført. Er du erhvervskunde med gyldigt momsnummer, så skriv det i din forespørgsel, og vi håndterer det derefter.

DE: Für Privatkunden innerhalb der EU gilt der Mehrwertsteuersatz Ihres eigenen Landes, nicht unser dänischer. Dieselbe Sauna hat daher in München einen anderen Endpreis als in Aarhus. Aktuelle Regelsätze zur Orientierung: Dänemark 25 %, Schweden 25 %, Deutschland 19 %, Niederlande 21 %, Frankreich 20 %, Belgien 21 %, Österreich 20 %, Finnland 25,5 %. Nennen Sie Ihr Land, und wir nennen den Preis mit dem korrekten, ausgewiesenen Satz. Als Unternehmen mit gültiger USt-IdNr. erwähnen Sie das bitte in Ihrer Anfrage.

Q8. "Do you offer financing or payment in instalments?"

EN: Please ask us directly rather than assume either way — the available payment methods are shown at checkout, and for a purchase of this size we would rather walk you through the options in a short conversation than give you a half answer in a comment. Book a consultation or send us a message with the model you are considering and your country, and we will tell you exactly what is available to you.

DA: Spørg os direkte i stedet for at gætte — de tilgængelige betalingsmetoder fremgår ved checkout, og ved et køb af denne størrelse vil vi hellere gennemgå mulighederne med dig i en kort samtale end give et halvt svar i en kommentar. Book en samtale eller skriv til os med model og land, så fortæller vi præcis, hvad der er muligt for dig.

DE: Fragen Sie uns bitte direkt, statt in eine Richtung zu vermuten — die verfügbaren Zahlungsarten sehen Sie im Checkout, und bei einer Anschaffung dieser Größe erklären wir Ihnen die Möglichkeiten lieber in einem kurzen Gespräch als in einer halben Kommentarantwort. Buchen Sie ein Gespräch oder schreiben Sie uns mit Modell und Land, dann sagen wir Ihnen genau, was für Sie möglich ist.

Q9. "Is this genuine Auroom? Are you an official retailer?"

EN: Yes. VeldoraHaven is an authorised Auroom Wellness retailer, and we are a partner of Röshults and EcoSmart Fire. Those three brands are the entire assortment — we would rather be deep in three than shallow in thirty. Every product is the manufacturer's own, with the manufacturer's specifications, and the imagery we publish is either approved brand material or our own.

DA: Ja. VeldoraHaven er autoriseret Auroom Wellness-forhandler og partner med Röshults og EcoSmart Fire. De tre brands udgør hele sortimentet — vi vil hellere være dybe i tre end overfladiske i tredive. Hvert produkt er producentens eget med producentens specifikationer, og det billedmateriale, vi udgiver, er enten godkendt brandmateriale eller vores eget.

DE: Ja. VeldoraHaven ist autorisierter Auroom Wellness Händler sowie Partner von Röshults und EcoSmart Fire. Diese drei Marken bilden das gesamte Sortiment — wir sind lieber in drei Marken tief als in dreißig oberflächlich. Jedes Produkt ist Originalware des Herstellers mit den Spezifikationen des Herstellers, und unser Bildmaterial ist entweder freigegebenes Markenmaterial oder unser eigenes.

Q10. "Do you deliver to my country?"

EN: We deliver across the EU and EEA. Denmark is our home market and our operational base, but the shop is built for cross-border European trade, with your own country's VAT rate applied. Tell us your country and delivery address and we will confirm delivery and quote the freight for that address. Outside the EU and EEA, ask us — we will tell you honestly whether it is something we can do properly, rather than take the order and work it out afterwards.

DA: Vi leverer i hele EU og EØS. Danmark er vores hjemmemarked og driftsbasis, men butikken er bygget til europæisk handel på tværs af grænser, med dit eget lands momsats. Oplys land og leveringsadresse, så bekræfter vi levering og prissætter fragten til netop den adresse. Uden for EU og EØS: spørg os — vi siger ærligt, om det er noget, vi kan gøre ordentligt, frem for at tage ordren og finde ud af det bagefter.

DE: Wir liefern in die gesamte EU und den EWR. Dänemark ist unser Heimatmarkt und Betriebsstandort, der Shop ist jedoch für grenzüberschreitenden europäischen Handel gebaut — mit dem Mehrwertsteuersatz Ihres Landes. Nennen Sie Land und Lieferadresse, dann bestätigen wir die Lieferung und kalkulieren die Fracht für genau diese Adresse. Außerhalb EU und EWR fragen Sie uns bitte — wir sagen ehrlich, ob wir das ordentlich leisten können, statt den Auftrag anzunehmen und es hinterher zu klären.

Escalate, do not answer

Hold and draft for a human on: complaints, product faults, safety concerns, injury claims, legal or press enquiries, requests for a discount, requests to publish a customer's home or project, and any question about a brand not in the confirmed portfolio.

Deliberately left out

- **Cold plunge tubs.** Two products exist in the catalogue but are held back: the specifications are US-market (110 V, °F, inches) and EU voltage is unverified. No post, pin or reply references them. The Pinterest board is published as *Recovery & Cold Water* with outdoor shower content only.
- **Gloster.** Prospective only. Not named anywhere.
- **Röshults BBQ Wood Oven, The Open Fire, and the Kaia garden sauna cabin.** No price set — excluded.
- **Complete Bundles, pergolas and third-party furniture.** Supplier not confirmed as a partner brand — no content built on them, so `/collections/complete-bundles` and `/collections/outdoor-furniture-pergolas` are not used as destinations.
- **Lead times, delivery dates and freight figures.** Never stated. Handled as "confirmed with the manufacturer per configuration" and "quoted per address".
- **Warranty terms.** Not documented in the source facts, so not claimed anywhere.
- **Heat-up times, temperatures and capacities** beyond what is verified. The 80 °C / 5 °C on-screen text in IG-03 and TT-10 is illustrative of ambient contrast on the shoot day — set it to the real readings on the day or replace it with "Hot in. Cold out."
- **Instagram Stories.** The playbook calls for 5–7 per week; not included in this pack's 98 items. Add from the same assets once publishing access exists.
- **NL, FR and SV localization.** The brief specified EN, DA and DE only. The keyword bank is structured so those markets can be added without restructuring.
- **Prices for most products.** Stated only where it adds real value (FB-02, FB-05 context, IG-14, Q1) and always with the destination country and its VAT rate named.
