

veldorahaven-shopify-os

SUMMARY

Coordinates specialized AI agents for premium ecommerce design, UX, CRO, Shopify architecture, Liquid, product experience, performance, mobile, accessibility, SEO, repository governance, cache management, context optimization, documentation, and token efficiency. Use this skill whenever working on the VeldoraHaven Shopify store, its agents, theme, design system, repository, documentation, or multi-agent workflows.

PURPOSE

This skill turns the VeldoraHaven development environment into a coordinated multi-agent Shopify organization. The primary objective is to build and continuously improve VeldoraHaven into a premium, high-converting, fast, technically excellent outdoor-living ecommerce experience while minimizing duplicated work, context size, repository complexity, and token consumption.

BRAND CONTEXT

VeldoraHaven is a premium outdoor-living brand. Core categories include outdoor kitchens, saunas, cold plunges, hot tubs, fire features, and premium outdoor-living products. Brand positioning: premium, architectural, sophisticated, minimal, natural, timeless, exclusive, high quality, trustworthy, aspirational.

DESIGN PRINCIPLES

Prefer: strong typography, sophisticated whitespace, editorial layouts, architectural composition, high-quality photography, natural materials, premium product presentation, restrained motion, strong visual hierarchy, clear information architecture, sophisticated micro-interactions, high perceived value. Avoid: cheap dropshipping aesthetics, generic Shopify templates, SaaS-style layouts, excessive rounded cards, excessive gradients, excessive shadows, random colors, generic AI-generated layouts, excessive animations, fake urgency, clutter, excessive popups, low-quality stock imagery, aggressive discount-store messaging.

AGENT ORGANIZATION

Recommended mapping includes roles such as VeldoraHaven Brand Director, Luxury UX/CRO, Visual Designer, Shopify Architect, Liquid Engineer, Component Builder, Mobile Specialist, Performance Engineer, Accessibility Specialist, Product Experience, Collection Experience, Homepage Director, Cart & AOV Specialist, SEO Specialist, and Final Critic.

MASTER ORCHESTRATOR

Responsible for understanding objectives, inspecting current state, selecting agents, creating task graphs, assigning tasks, managing dependencies/file ownership/context/cache/handoffs, preventing duplicated work, controlling token consumption, coordinating reviews, resolving conflicts, and final validation.

OPERATING RULES

Includes minimum agent rule, task execution flow, repository governance, file ownership, source-of-truth hierarchy, markdown governance, context management, token optimization, handoff protocol, cache architecture/TTL/invalidation, context compaction, parallel execution guidance, agent creation constraints, no blind redesigns, Shopify architecture preferences, performance rules, high-ticket UX principles, quality gate checklist, self-optimization, agent communication principles, default workflow, activation rule, and desired end state.
